**Courses**
- Master’s Thesis

**Prerequisites**
Students can start their Master’s thesis if six from seven compulsory courses have successfully been completed and a minimum of 70 credits has been collected.

**Learning goals / competences:**
With the completion of the Master’s thesis,
- the students acquire the ability to plan, organize, develop, operate and present complex problems in Computational Engineering,
- qualifies students to work independently in the field of Computational Engineering under the supervision of an advisor,
- the associated presentation serves to promote the students’ ability to deal with subject-specific problems and to present them in an appropriate and comprehensible manner,

Further, it serves to prove whether the students have acquired the profound specialised knowledge, which is required to take the step from their studies to professional life, whether they have developed the ability to deal with problems from their in-depth subject by applying scientific methods, and to apply their scientific knowledge.

**Content**
The Master’s thesis can either be theoretically-, practically-, constructively- or organisationally-oriented. Its topic is determined by the respective supervisor. The results should both be visualised and illustrated in writing in a detailed manner. This particularly includes a summary, an outline and a list of the references used within a specific thesis and obligatorily, an oral presentation.

**Teaching Methods / Language of Report**
Independent work in seminar rooms and computer labs; testing plants, where applicable. The topic of the Master’s thesis is issued by a lecturer of the course. The student conducts research independently and presents the results in the form of a final written report and an oral presentation / English or German.

**Modes of assessment**
- Review of the Master thesis report and oral presentation (100%)

**Requirement for the award of credit points**
Successful evaluation (grade not lower than 4.0) of Master’s thesis and oral presentation

**Module applicability**
- MSc. Computational Engineering

**Weight of the mark for the final score**
- 40 %

**Module coordinator and lecturer(s)**
The Master’s thesis may be issued and supervised by any habilitated, appointed or designated lecturer. External lecturers, who are not directly teaching in the CompEng course, have to apply for the position as 1st supervisor to the examination board.

**Further information**
