## Courses
- FEM in Linear Structural Mechanics
  - Contact hours: 4 SWS (60 h)
  - Self-Study: 120 h
  - Group Size: No Restrictions

## Prerequisites
Basics in Mathematics, Mechanics and Structural Analysis (Bachelor level)

## Learning goals / Competences
After successfully completing the module, the students
- have basic knowledge of the Finite Element Method (FEM),
- are able to transfer initial boundary value problems of structural mechanics into discretized calculation models based on FEM and thus to solve simple tasks of structural mechanics independently (e.g. calculation of truss structures, disc-like or volume structures),
- have advanced knowledge to understand the functionality of calculation programs based on FEM and to critically evaluate their results,
- are able to independently implement corresponding user-defined elements in FE programs and perform numerical analyses of beam and shell structures,
- have knowledge to solve simple coupled problems (temperature, structural mechanics).

## Content
The course covers the basic knowledge of linear FEM, which is based on the principle of virtual work. In particular, the following topics are taught in the course:
- Isoparametric finite elements for trusses, slices, beams, shells, three-dimensional volume elements for application in statics and dynamics,
- Finite element formulations for coupled (e.g. thermo-mechanical) problems,
- consistent explanation of the fundamentals (basic equations, principle of variation),
- Numerical integration, assembly of the elements to a discretized structure and the solution of the static and dynamic structure equation,
- Discussion of stiffening effects ("locking") and their avoidance.

## Teaching methods / Language
Lecture (2h / week), Exercises (2h / week) / English

## Mode of assessment
Written examination (180 min, 100%) / Optional seminar papers, partially with presentations, to get bonus points for the exam (60 hours, deadlines will be announced at the beginning of the semester)

## Requirement for the award of credit points
Passed final module examination

## Module applicability
MSc. Computational Engineering, MSc. Bauingenieurwesen

## Weight of the mark for the final score
4 %

## Module coordinator and lecturer(s)
Prof. Dr. techn. G. Meschke, Assistants

## Further information
